-----	-----------------	----------	------------------	------

RECOMMENDED MINIMUM INVESTMENT TERM

1 Year+	2 Years+	3 Years+	5 Years+	7 Years+
---------	----------	----------	----------	----------

FUND OBJECTIVE

The fund aims to outperform money market investments and produce a relatively high level of income. It aims not to lose money over any 6-month period.

WHO IS THIS FUND FOR?

The fund is suitable for investors needing a relatively high level of income together with some capital appreciation. These are investors who are able to live with volatility in income distribution levels. Income is paid in the form of quarterly distributions and can be supplemented with regular automatic withdrawals.

The fund conforms to the legislation governing retirement funds and is thus a suitable investment vehicle for retirement funds.

INVESTMENT MANDATE

This actively managed fund invests in a wide range of Namibian and South African interest-bearing assets (for example, money market instruments, bonds, listed property and preference shares). The fund manager moves actively between these assets, based on a relative value approach.

With no restrictions on the average duration of the portfolio, the fund may hold both short- and long-term securities. This gives greater flexibility in taking advantage of interest rate trends and thus to maximise capital gains and income yields. Interest income can be reinvested to generate further growth, or paid out to supplement income. With a secondary focus on capital gains, the fund will maintain a high quality bond exposure and seek out listed property companies showing good prospects for growth and yield.

BENCHMARK:	BEASSA ALBI (1-3 Year) Index
RISK OBJECTIVE:	The fund aims to protect capital over rolling 6-month periods.
FUND CATEGORY:	Namibia Managed Prudential Funds
FUND MANAGER(S):	Tommy Mbundu

FUND MANAGER INFORMATION

TOMMY MBUNDU | PORTFOLIO MANAGER

- CA(Nam) (SA)
- 14 years of investment experience

FUND COMMENTARY

The Intercontinental Exchange Bank of America Move Index measures the US bond market volatility by tracking a basket of over-the-counter options on US interest rate swaps. The index tracks implied yield volatility of the yield curve, weighted to the basket of at-the-money one-month options on the two-year, five-year, 10-year, and 30-year constant maturity interest rate swaps (Bloomberg). This index has been falling this past year as a proxy to US bond market risk. This is echoed by the South African five-year Credit Default Swaps, which also decreased this quarter by 18.22% to 187.42 (quarter one: 229.19). These trends are hardly surprising given the cease fire agreement that was reached between Iran and Israel, and not to mention the deals that the US government has put place since Liberation Day, which has resulted in somewhat muted concerns on trade, in some respects. This has naturally translated into the US Dollar Index also rescinding 7.04% this quarter, as investors took on a more risk-on approach in the same period. The US Treasury Bond Index managed to return 0.85%, despite the US 10-year bond yield climbing steadily to 4.23% for this quarter (quarter one: 4.21%). Closer to home, the FTSE/JSE All Bond Total Return Index and the IJG All Bond Index returned 5.88% and 3.02% respectively, for the quarter ending.

The main driver to performance was our over-exposure to the +12-year maturity bucket.

We remain duration neutral and will position our fund accordingly, while gradually decreasing our allocation from our floating rate notes, as the world transitions towards dovish sentiments.

Investors can be comforted by investing with us given our expertise and tenure in the market, as our investment team and philosophy has been tested and remain resilient.

Figures as at 30 June 2025, based on a lump sum investment excluding charges (bid-bid prices). Source: Morningstar. To ensure that the portfolio is always managed in accordance with its mandate, Old Mutual Unit Trusts Namibia reserves the right to close the fund to new investors. Unit trusts are generally medium- to long-term investments. Past performance is no indication of future growth. It is important that you are prepared for some shorter-term fluctuations as your investment moves in line with the markets. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. The daily price is the current value of the fund's assets plus interest income (minus expenses) divided by the number of units in issue. The fund's TER reflects the percentage of the average Net Asset Value of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. You can easily sell your investment at the ruling price of the day (calculated at 15h00 on a forward pricing basis).
